

a smaller footprint 

A single company can make a very big difference. Every year Verizon recycles millions of feet of cable and PCs. And last year, we started offering a carbon-free smartphone and ENERGY STAR® set-top boxes.

The Comprehensive Sustainability Program represents Verizon's commitment to finding innovative ways to reduce the carbon footprint of its global operations. This bold initiative helped land Verizon on *Newsweek's* Global Green 100 list.

Smart Grid Development is an ongoing priority for Verizon, allowing the utility industry to achieve efficiencies via the company's intelligent IP and wireless networks.

Alternative Fuel Vehicles have shifted Verizon to a green fleet. The company will utilize CNG, E85, biofuels and hybrid technology to reduce carbon emissions by 480 tons per year.

For the past two years, Verizon has been included in the **Dow Jones Sustainability** North American Index, which lists leading companies as measured by governance and social and environmental performance.
